A revolution in
crowdfunding

mint Me

CONTEXT

Web monetization and **crowdfunding** are becoming more popular every year with the increasing assimilation of Internet and social media platforms for bigger means than just entertainment. Global communication manifested in Bloggs, information portals, online services and digital media marketing. All of these influence the methods in which startups, artists and creators of all kinds share their ideas and earn remuneration and support. The world has become a huge community of **mutual support** in which every person has access to many possibilities around the world, as to raise money for their personal projects or offer support to other projects in just a few clicks. But as any modern systems or methods, monetization through the web is being further developed and improved; and thanks to promising technologies like **Blockchain**, these significant changes can become a reality now more than ever.

mintMe revolutionizes how people help each other by allowing both sides to earn through an innovative way of crowdfunding.

WHY IS MINTME A REVOLUTIONARY PROJECT?

mintMe is proof of improvement and innovation, aiming to become a prominent platform for **creators and investors**. It allows any company or person to tokenize their projects and promote it to a huge set of possible supporters and buyers in order to gain funds like in any crowdfunding campaign but at the same time, the newly created tokens at mintMe are part of a trading chart where investors of all kinds can also keep the possibilities of **earning** from it either by offering the tokens for a higher price or holding them, meaning that mintMe brings a revolutionary approach to the crowdfunding world by **allowing both sides to earn**.

FEATURES AND BENEFITS OF MINTME:

mintMe is a platform for **Distributed Ledger Technology** (DLT) token generation and exchange; a digital marketplace where traders, creators, and any users can hold, buy and sell cryptocurrencies using digital assets supported by us. Based on the **Webchain Blockchain**, it's gathering all of the innovative features of this modern technology including: **security, speed, and trust**, overcoming issues that other crowdfunding platforms present.

Here, listed some of the **best features of mintMe**:

-Both sides can earn: Anyone can be a token creator, a token trader or both.

-Social interaction: People can establish direct contact with other creators and traders within the platform.

-User friendly: Any user can create a token in just a few clicks, start a campaign and trade right after registration.

-Create a token for free: Create and personalize your own token baking it up with your original content, all of these with no charges.

-Easy withdrawal: In comparison to other crowdfunding platforms in mintMe you don't need to meet any certain amount in order to validate your campaign and withdraw your funds.

-Security and speed: mintMe is also a crypto exchange platform that counts with two factor authentication and email verification. Thanks to Blockchain technology every transaction is verified and time stamped and it's done in just a few minutes without possibilities of annulment or revoke.

-Smart contracts: They ensure the execution of all transactions. Smart contracts are executed automatically, once the conditions are met, exactly as programmed without any possibility of censorship, downtime, fraud or third-party interference.

-Support: regular email support is available in more than 5 languages: English, Spanish, Polish, Arabic, French, Russian and others.

HOW DOES IT WORK?

At **mintMe**, there are two approaches from which you can choose, either one of them or both.

1) You can be a token creator: anyone can create a token that represents him/herself or any personal or corporate projects, backing up those tokens, and adding value to them with their content, special services or original creations: a song, a video, a design, written content or a print shirt. Anything that could be exchanged to someone in return for their support, since at mintMe you will be able to promote your tokens to a huge set of possible supporters and buyers and earn funds like you would with a crowdfunding campaign.

Reach your maximum potential as a content creator, growing and letting people know about you; Expand your possibilities as a trader and support people in which you believe.

2) You can be a token trader: Every investor will be able to read each token creator's profile and buy it if he so desires, supporting the campaign. Since every token created will be part of a trading chart, after the purchase, the investor will be able to offer those tokens for a higher price or hold them to see if the fluctuation works out in his favor, just like a trading chart is supposed to operate.

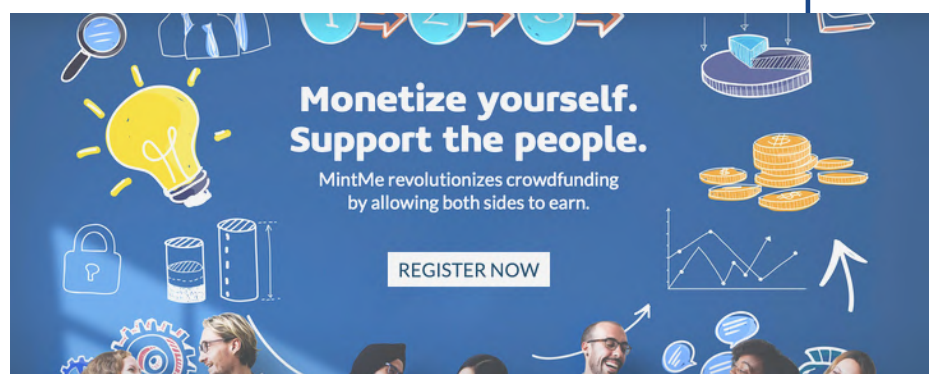

mintMe is also a social platform where cryptocurrency traders can interact with token creators and other traders, which signifies the best environment for business growth, partnership, market and **mutual support**.

MINTME'S LOGO AND WEBSITE INSIGHT

Anyone can mint a token that represents themselves or a project in just a few clicks, personalize it and promote it to obtain support.

Creating money as an activity is called **minting**, but minting is also used when creating or innovating something in general. We've decided to name our platform **mintMe**, to let everyone know that from now on they will be their own money **issuer**, and **creator**, letting them promote and/or trade the way they consider it, allowing them to choose and do what they think it's **best for their project**.
